

Specify LED Lighting & Controls with Confidence

AIA Course #AB268

1 Hour AIA/HSW Learning Unit

PROGRAM DESCRIPTION

The transformation from electric to electronic lighting has required us to review all our lighting specifications to be sure that they fully describe the differences in this new technology. The purpose of this presentation, is to review those areas of a typical LED specification for the “Type A” luminaire on a project that need to clearly describe what the performance requirements are for an LED luminaire.

LEARNING OBJECTIVES

- Learn the basic language that should be included in your LED luminaire and controls specifications
- Know what that specification language really means and why it is important to include it in your LED specifications
- Fully understand LED color and quality, how they are measured and why they are key components of your LED specification
- Understand and know how the life of LEDs is determined and verified

FACILITATOR QUALIFICATIONS

All Acuity Brands CES presenters have been trained on CES guidelines and presentation skills. In addition, all presenters have extensive industry experience and receive ongoing training in the science of lighting and best practice.
